

Line-up terminal

Features

ESC-CBC Series

- with UL94V-0 polyamide insulating body
- reduced overall dimension
- patented "Easy bridge" system: double possibility to insert PTC multi-pole cross-connections, without the need of insulating protection
- available in grey RAL 7042 and blue RAL 5015 colour version
- operating temperature range: $-40 \div +80^\circ\text{C}$

Use of terminals with aluminum conductors

Connection of aluminum conductors

The aluminum conductor without an insulating sheath starts to oxidize, decreasing the contact quality (Aluminum oxide is not a good conductor) and, consequently, reducing its conductivity.

Steps to follow to ensure a good electrical and mechanical connection of aluminum cables with our terminal blocks:

- 1) Clean the stripped conductor with a wire brush to remove the oxide layer;
- 2) Soak the clean conductor in neutral Vaseline and connect it immediately, tightening the clamp to the prescribed torque (do not exceed the suggested tightening torque!). Should you reconnect the same cable this step must be repeated (cleaning and soaking of the conductor in Vaseline);
- 3) Execute the installation in a free-of-moisture environment and in a non-aggressive atmosphere;
- 4) Recheck the tightening after a few days of settling (this precaution is also suggested for copper cables);
- 5) If the cable section is greater than 25 mm², the use of ferrules is recommended.

From a technical standpoint the electrical conductivity of the aluminum is lower than copper one:

Electrical resistivity at 20 °C

- Copper: 0.0178 mm² / m

- Aluminum: 0.0284 mm² / m

As a result of the different resistivity (and, therefore, of the different electrical conductivity) with the same cable section, with the same ambient temperature and allowed ΔT , under the same conditions the current flow rate in an aluminum cable will be lower than the copper cable one. So, from the point of view of the current flow, the aluminum cable cannot stress the connected clamp more than the copper cable: the heating of the clamp is a consequence of the voltage drop which is proportional to the current flow, and, as discussed above, the current flow in an aluminum cable is lower.

Technical data

Cross connections

Easy Bridge System

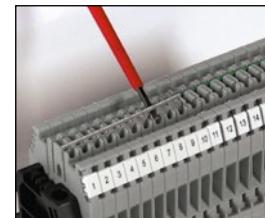

- screwless, snap-in insertion
- transversal and staggered mode connection possibility
- once inserted, intrinsically IPXXB protected resulting installation, without the need for further insulating covers
- patented system

1

2

3

1-2 After having cut the bar according to the number of poles, insert the cross-connection, in the appropriate groove of the terminal block. At this point, by using the blade of a screwdriver, push down the cross-connection until it reaches its blocking point. The cross connection will be fully insulated and intrinsically IPXXB protected.

3 To remove the cross-connection, insert the blade of the screwdriver in the jumper slot, then lift it up and finally extract it.

ESC-POF permanent cross connections

Allowing the cross connection of two adjacent terminal blocks. Mounted in a suitable position in order to prevent injuries

Each ESC-POF jumper is composed by:

- 2 screws
- 2 sleeves
- 1 plate with 2 holes

All the components are in brass, with nickel plating.

ESC-PT end sections

For each type and cross section of terminal block, there is a specific insulating and closing end section to be placed on the open element of each terminal board. This end section may also be used to separate different phases of adjoining terminal blocks linked by cross connections or to increase insulation distances where specific circumstances may require it. The end sections have the same overall dimension as the related terminal block, thicknesses are given in the table below.

ESC-PRP protections

The cross connection, consisting of a multiple commoning bar and screws and sleeves, already placed in a recessed position with respect to the terminal board, can be further protected from accidental contact using a nylon U-shaped cover having a standard length of 10 cm. This white-coloured cover, can also be written upon, to serve as a label or reference point on the terminal board.

On the cover suitable slits are arranged to facilitate its removal by using a screwdriver.

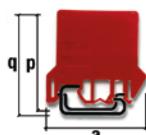

for terminal blocks with a cross section of 4-16 mm ²	ESC-PRP/7
for terminal blocks with a cross section of 25-70 mm ²	ESC-PRP/8

Technical data

ESC-DFU partitions

In polyamide available in red, colour, 1.5 mm thick, for the separation of elements on the terminal board, in order to make certain circuits easy to locate or to increase the insulation distances between terminal blocks.

The partitions can also be used to increase the insulation distances between adjacent parallel multiple commoning bars. White and green partitions available while stocks last.

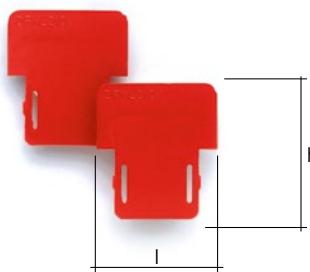

NOTE:

q dimension can be obtained by adding 4 mm to dimension p

Features

ESC-QBLOK

- with UL94V-0 polyamide insulating body
- available in 7 and 12 hole versions
- mounted onto PR/3 profiles conforming to IEC 60715 standards, TH/35 type
- inherent protection against accidental contact IPXXB level according to IEC 60529
- possible to label with a CNU/8 tag
- conformance to EN 60998-1:2004 and EN 60998-2-1:2004 regulations

Features

ESP-HMM Series

- with UL94V-0 polyamide insulating body
- mounting onto rails according to IEC 60715 Std., "TH/35" type
- • available in standard grey RAL 7042 colour and blue RAL 5015 colour version

Cross connections

Easy Bridge System

- screwless, snap-in insertion
- transversal and staggered mode connection possibility
- once inserted, intrinsically IPXXB protected resulting installation, without the need for further insulating covers
- patented system

1

2

3

- 1-2 After having cut the bar according to the number of poles, insert the cross-connection, in the appropriate groove of the terminal block. At this point, by using the blade of a screwdriver, push down the cross-connection until it reaches its blocking point. The cross connection will be fully insulated and intrinsically IPXXB protected.
- 3 To remove the cross-connection, insert the blade of the screwdriver in the jumper slot, then lift it up and finally extract it.

ESP-PT end sections

For each type and cross section of terminal block, there is a specific insulating and closing end section to be placed on the open element of each terminal board. This end section may also be used to separate different phases of adjoining terminal blocks linked by cross connections or to increase insulation distances where specific circumstances may require it. The end sections have the same overall dimension as the related terminal block, thicknesses are given in the table below.

Terminal block	End section	
	Type	Thickness [mm]

ESP-DFH partitions

In polyamide available in red colour, 1.5 mm thick, for the separation of elements on the terminal board, in order to make certain circuits easy to locate or to increase the insulation distances between terminal blocks. The partitions can also be used to increase the insulation distances between adjacent parallel multiple commoning bars. White and green partitions available while stocks last.

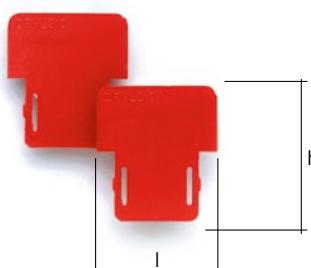

NOTE:
q dimension can be obtained by adding 4 mm to dimension p

Partition	Dimensions a x p
ESP-DFH/4	97 x 51,5
ESP-DFH/1	64 x 42,5

ESP-DFM partition insulation of cross connections - bridges

Red coloured in polyamide when it is necessary to guarantee the insulation distance between permanent or switchable cross connections, inserted between adjacent pairs of terminal blocks and, similarly, between multiple commoning bars, inserted between adjacent groups of terminal blocks.

Partition	Dimensions l x h [mm]	Thickness [mm]
ESP-DFM/500	4,6 x 13,5	0,5

rated voltage / rated current / gauge conf. to IEC 60947-7-1	800 V / 24 A / A3	800 V / 32 A / A4
rated voltage / rated current / AWG / tightening torque value UL	600 V / 20 A / 24-12 AWG	-
rated impulse withstand voltage / pollution degree	8 kV / 3	8 kV / 3
insulation stripping length	(mm)	10
height / width / thickness	└ TH/35 7,5 mm	76 / 69 / 8
height / width / thickness	└ TH/35 15 mm	84 / 69 / 8
ACCESSORIES		
End section	ESP-HMT.2/1+2/PT	ESP-HMT.4/1+2/PT
Rated current carrying capacity of jumper	(A)	24
Marking tag	printed or blank	ES-NU0851
End bracket		ES-BTO, ES-BT/3

Features

- Disconnect terminal blocks ESP-HMS
- with UL94V-0 polyamide insulating body
 - disconnect by lever and by slide link
 - for test and measurement circuits
 - mounting onto rails according to IEC 60715 Std., "TH/35" type
 - available in standard grey RAL 7042 colour

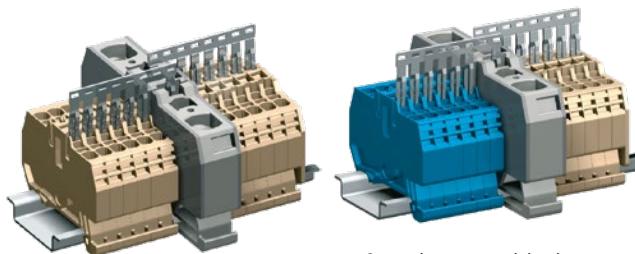

Technical data for ESP-HMS

	ESP-HMS.2
TECHNICAL CHARACTERISTICS	
function / type	disconnect by lever
rated cross-section	(mm ²)
connecting capacity:	2,5
flexible(mm ²)	0,2 ÷ 4
rigid(mm ²)	0,2 ÷ 4
max. flexible with ferrule (mm ²)-ferrule type	2,5 - WP25/14
rated voltage / rated current / gauge conf. to IEC 60947-7-1	400 V / 16 A / A3
rated voltage / rated current / AWG UL	600 V / 24 A / 24-12 AWG
rated impulse withstand voltage / pollution degree	6 kV / 3
insulation stripping length	(mm)
height / width / thickness	└ TH/35 7,5 mm
height / width / thickness	└ TH/35 15 mm
ACCESSORIES	
End sections	grey
Permanent cross connection (intrinsically IPXXB protected once mounted)	ESP-PTC/03/02 poles ESP-PTC/03/03 poles ESP-PTC/03/10 poles
Rated current carrying capacity of jumper	(A)
Marking tag	printed or blank
End bracket	ES-BTO

Features

Potential distribution terminal blocks ESP-HMR

- with UL94V-0 polyamide insulating body
- 16 mm²
- mounting onto rails according to IEC 60715 Std., "TH/35" type
- • available in grey RAL 7042 colour
- • can be connected with ESP-HMM.2

Spring clamp potential distribution terminal block, single power supply

Spring clamp potential distribution terminal block, double power supply

Technical data for ESP-HMR**ESP-HMR.16, ESP-HMR.16/D****TECHNICAL CHARACTERISTICS**

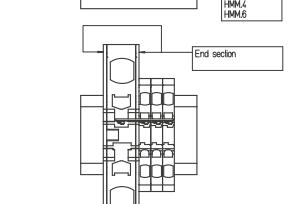

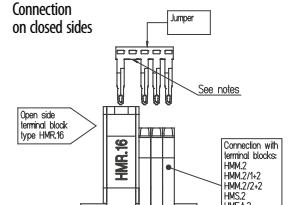

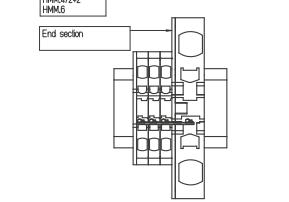

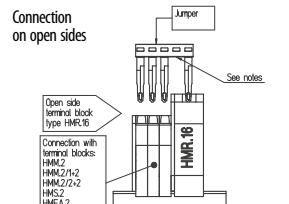

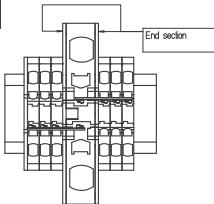

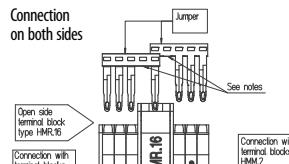

function / type	potential distributor	
rated cross-section (mm ²)	16	
connecting capacity:		
flexible(mm ²)	1,5 ÷ 25	
rigid(mm ²)	1,5 ÷ 25	
max. flexible with ferrule (mm ²)-ferrule type	16 - WP160/22	
rated voltage / rated current / gauge acc. to IEC 60947-7-1	800 V / 76 A (*) / A7	
rated voltage / rated current / AWG UL	-	
rated impulse withstand voltage / pollution degree	12 kV / 3	
insulation stripping length (mm)	18	
height / width / thickness	TH/35 7,5 mm	50 / 80 / 12,8
height / width / thickness	TH/35 15 mm	57 / 80 / 12,8
ACCESSORIES		
End sections	grey	see table
Permanent cross connection	see table	
Rated current carrying capacity of jumper (A)	see table	
Coloured partition	red	ESP-DFH/4
Marking tag	printed or blank	ES-NU0851

NOTES:
The number of poles to be used shall be equal to the number of terminal blocks to be connected, including the distribution terminal block + 1
To allow the connection to the distribution terminal block the second pin of the PTC jumper shall be trimmed off
*Connectable only on the open side of the distribution terminal block

Terminal block connected to supply terminal	End sections	Permanent cross connection (**)	
		Type	Total capacity
ESP-HMM.2	ESP-HMR.16-2/PT	ESP-PTP0303 ESP-PTP0310	24 A
ESP-HMM.4	ESP-HMR.16-4/PT	ESP-PTP0503 ESP-PTP0510	32 A
ESP-HMM.6	ESP-HMR.16-6/PT	ESP-PTC/08/10 poles	41 A

(**) In order to enable the connection to the supply terminal the second pin must be always removed from the strip of the PTC jumper.

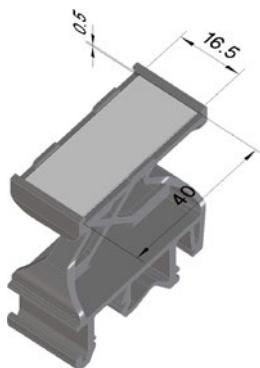

Connection

The number of poles of the PTC jumper must be equal to the number of terminal blocks to be cross-connected plus 1

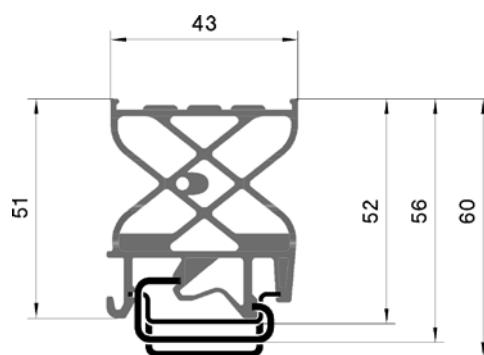

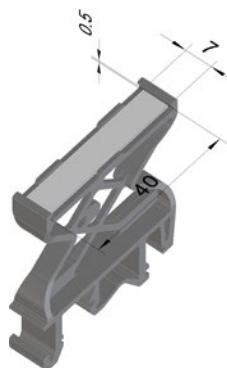

Technical data

Dimensions

ES-PTM + ES-TA1640AW

ES-PTMS + ES-TA407AW

Features

- ES-PZM.4 cover suitable for terminal blocks with overall dimension up to approximately 58 mm (mounting rail included).
- ES-PZM.6 cover suitable for terminal blocks with overall dimension over 58 mm, (mounting rail included).

Technical data for ES-PZM Series

	ES-PZM.4	ES-PZM.6	ES-PZM.4 + ES-PZD.4/S0	ES-PZM.6 + ES-PZD.6/S0
TECHNICAL CHARACTERISTICS				
Dimensions (mm)	a = 64+2 / b = 32	a = 85+2 / b = 36		
Mounted with support	ES-PZD.4/S0	ES-PZD.6/S0		
Maximum dimension: on IEC 60715/G32 mounting rail on IEC 60715/TH35 mounting rail			70 / 82 (*)	82 / 94 (*)
			65 / 77 (*)	78 / 90 (*)
